

**Customer:**

TGI Technoform Glass Insulation GmbH  
Matthäus-Merian-Str. 6  
34253 Lohfelden, GERMANY

**Project/Customer:**

TGI Georgian Bars in double and triple insulating glass units

**Content:**

- $U_f$  simulation of profiles in accordance to EN ISO 10077-2
- $U_g$  calculation of insulating glass in accordance to EN 673
- $\Psi_g$  simulation of IG Georgian bars in accordance to EN ISO 10077-2 and EN ISO 10211
- $U_w$  calculation of windows in accordance to EN ISO 10077-1
- Simulation of isothermal lines, surface temperatures and temperature factor  $f_{Rsi}$

**Object:**

- Profile: Reinforced PVC window profile in accordance to IFT guideline WA-08/2
- Insulating glass units:
  - Double insulating glass unit 4-16-4,  $U_g = 1.1 \text{ W/m}^2\text{K}$ , 90% Argon filling, Low-E coating at face #3 ( $\epsilon_n = 0.03$ )
  - Triple insulating glass unit 4-12-4-12-4,  $U_g = 0.7 \text{ W/m}^2\text{K}$ , 90% Argon filling, Low-E coating at face #2 and #5 ( $\epsilon_n = 0.03$ )
- Insulating glass edge spacer: TGI M Spacer with 3 mm secondary sealant (Polysulphide or equal/better)
- Georgian Bar: TGI Georgian Bar 1000138.AZ and 1000140.AZ (see drawing)

## Materials:

	Boundary conditions	$R_s / R$ ( $m^2K/W$ )	$\theta$ (°C)	10077-2 conform
	external air	0.040	0.0 / -10.0	X / -
	internal air (reduced radiation and convection)	0.20	20.0	X
	Material	$\lambda^*$ ( $W/mK$ )		10456 conform
	Float glass	1.0		X
	Gas in IGU cavity	according to EN ISO 673		X
	Polypropylene (TGI Georgian Bar)	**0.19		-
	Polypropylene glass fibre reinforced (TGI Georgian Bar)	**0.25		-

For thermal simulations designed values of thermal conductivity in accordance to EN ISO 10456 must be used. The tabulated values are designed values unless there are marked as different.

Values marked with “ \*\* “ are designed values taken from customers declaration. Certificates are available from the customer.

## Assumptions/Advices:

- Due to the lack of missing normative definitions for calculating linear thermal transmittance of Georgian bars the values in this report were calculated in the following way: The gas cavity of the IGU as well as the gas cavities between the coated and uncoated glass panes and the Georgian bars were separately calculated in accordance to EN 673 and equivalent conductivities were determined. Convective exchanges between the gas cavities divided by the Georgian bars are not taken into account. Also differences of the convective performance in the gas between vertical and horizontal Georgian bars are not taken into account.
- The following results are only valid for the shown geometries and material characteristics. The geometries are based on drawing provided by the customer.

## Isothermal lines:

-10°C to 20°C in 1°C steps

**Red:** 13°C isothermal line

**Blue:** 10°C isothermal line (condensation critical temperature 20°C, 50%)

**Black:** 0°C isothermal line
